SUMMARY

Software engineer with 11 years at one product startup, promoted from Member of Technical Staff to Senior Software Engineer, and technical lead on its fintech products since 2023. I build and run whole systems: Linux servers, PHP and MySQL backends, Flutter and web apps, and the security underneath them, from end-to-end encryption to wallet keys and recovery. In 2026 I shipped two products by directing AI coding agents: hejje, an end-to-end encrypted fitness app with a Go backend and native apps, built solo, and PurePay, a peer-to-peer payments wallet on Solana, built with one teammate.

INDEPENDENT PRODUCT

hejje · Founder and sole developer Jul 2026 – Present

Privacy-first fitness tracker for running, cycling and the gym. Live on Google Play and the App Store. hejje.app

- Built by directing AI coding agents (Claude Code). I own the product, architecture, security design, code review, device testing, releases and operations: 390+ commits in four months.
- Go backend: REST API over SQLite (a central database plus one vault per user), ed25519-signed requests with a replay window, rate limiting, presigned uploads to Cloudflare R2, and a Go test suite.
- End-to-end encryption: per-activity AES-256-GCM keys wrapped with X25519, recovery-key restore, and an encrypted mailbox for sharing with followers. The server never sees activity data.
- Sync protocol: sequence-numbered log shipping with compare-and-swap, so a user's devices converge after offline edits.
- Operations: Hetzner VPS, systemd, Apache reverse proxy, TLS, separate dev and prod environments, nightly backups. Ran a security audit and rolled out a new request-signature version without breaking older app builds.
- Native clients in Kotlin with Jetpack Compose (Android, Health Connect, widgets), SwiftUI (iOS) and WinUI 3 (Windows, in development). Offline city maps cut on demand by the server, and an on-device AI assistant that answers questions without data leaving the phone.

EXPERIENCE

Hashfoundry Technologies Pvt Ltd · India Aug 2015 – Present

Product startup where every engineer works across the stack. Three products, three roles.

Senior Software Engineer (Technical Lead) Aug 2023 – Present

PurePay, peer-to-peer payments on Solana (Sep 2026 – present). Before that, Tribex, a fintech wallet and invoicing app.

- Co-building PurePay with one other engineer by directing AI coding agents (Claude Code). Live on Google Play, iOS in App Store review. purepaynetwork.com
- Self-custody wallet: one 32-byte seed backs both the ed25519 signing key and the X25519 encryption key, restorable from a 12-word BIP39 recovery phrase, with a transaction PIN and biometric app lock.
- Payments and profile backups written to Solana as signed transactions with memos, packed into Solana's 1,232-byte transaction limit. New users onboard with zero SOL through a relay that sponsors network fees.
- Privacy-preserving KYC: a profile publishes only digests of its private details, which another user checks and certifies. Encrypted chat between wallets.
- Merchant features: QR payments, coupons, ratings and reviews, receipts, check-ins and multi-currency stablecoin balances.
- Tribex (2023 – 2026): designed the layered encryption and master-key backup and restore, built offline-first Flutter and Vue.js clients, and mentored 10+ junior engineers.

Senior Software Engineer · Flockbrain Aug 2019 – Jul 2023

Content aggregation and recommendation on web, Android and iOS

- Designed and built a platform that gathers blogs, YouTube videos, podcasts and articles into one personalised feed.
- Built crawlers and ingestion pipelines that collect and normalise 10k+ articles a month from RSS feeds and other sources, with automatic keyword tagging and classification.

- Built ranking and recommendations from behaviour signals: interests, dwell time, engagement and five kinds of user reaction.
- Shipped the Flutter apps for Android and iOS and owned build, release and distribution.
- Built admin tools and analytics dashboards (content performance, keyword trends, engagement, user geography) so the non-technical team could run the pipeline themselves.
- Backend and APIs in PHP and MySQL. Mentored 30+ interns and junior engineers.

Member of Technical Staff · Taskera Aug 2015 – Jul 2019

Workflow automation and resource management

- Designed the architecture, backend and MySQL schema for a project management platform that gamifies productivity.
- Built automatic task scheduling around priority, working hours, holidays, leave and resource availability, and an employee performance score from task and project progress.
- Built and ran the company's own servers from scratch: automated OS provisioning with Kickstart, RPM packaging and Apache deployments.
- Ran MySQL master-slave replication, backups and recovery, and hardened production with iptables, TLS and Apache configuration.

SKILLS

Languages	PHP, Dart, JavaScript, SQL, shell scripting
Backend	REST API design, authentication and request signing, MVC
Data	MySQL (schema design, indexing, replication), SQLite, Firebase Firestore, IndexedDB
Security	End-to-end and envelope encryption, AES-GCM, RSA, ed25519 and X25519, BIP39 recovery phrases, key backup and recovery
Payments	Solana transactions and memos, fee sponsorship, stablecoin tokens, QR payments
Infrastructure	Linux (CentOS, Ubuntu), Apache, systemd, Kickstart, RPM, iptables and ufw, TLS, Cloudflare DNS and R2, CI/CD
Mobile and web	Flutter, Vue.js, Tailwind CSS, HTML and CSS
AI-agent development	Claude Code across Go, Kotlin and Jetpack Compose, Swift and SwiftUI, C# and WinUI 3
Leadership	Technical lead; mentored 40+ engineers and interns

EDUCATION

Bachelor of Science in Computer Science · University of Mysore 2009 – 2012

Master of Computer Applications (MCA) · Vidya Vikas Institute of Technology (VTU) 2012 – 2015

Completed all three years of coursework; degree not awarded.

LANGUAGES

English (fluent) · Kannada (native)
